// class to represent Book

```
class Book {  
    String title;  
    String writer;
```

// constructor with parameters

```
Book (String title, String writer)  
{  
    this.title = title;  
    this.writer = writer;  
}
```

// method

```
String getTitle()  
{  
    return this.title;  
}
```

// method that will take parameter

```
void setWriter (String writer)  
{  
    this.writer = writer;  
}
```

// class to represent Laptop

```
class Laptop {  
    String brand; // attribute  
    int memory;
```

// constructor

```
Laptop (String brand, int memory)  
{  
    this.brand = brand;  
    this.memory = memory;  
}
```

// method that will return value

```
String getBrand ()  
{  
    return this.brand;  
}
```

// method that will take parameter.

```
void UpgradeMemory (int newMemory)  
{  
    this.memory = newMemory;  
}  
}
```

// ~~class~~ class to represent table

```
class Table {  
    String material;  
    int legs;  
  
    Chain(String material, int legs)  
    {  
        this.material = material;  
        this.legs = legs;  
    }  
}
```

// method.

```
String getMaterial()  
{  
    return this.material;  
}
```

```
void setLegs(int legs)
```

```
{  
    this.legs = legs;  
}
```

```
}
```

```
}
```

// main function

```
class Assignment {
```

```
    public static void main(String[] args)
```

```
    {
```

// Book

```
        Book book = new book ("2024", "Sakib Hossain");
```

```
        System.out.println (book.getTitle());
```

```
        book.setWriten ("Hossain");
```

// Laptop

```
        Laptop laptop = new Laptop ("HP", 8);
```

```
        System.out.println (laptop.getbrand());
```

```
        laptop.UpgradeMemory (16);
```

// Table

```
        Table table = new table ("Steel", 4);
```

```
        System.out.println (table.getMaterials());
```

```
        table.setlegs (3);
```

```
    }
```

```
}
```
